

7th Annual
Dabholkar - Kalburgi Lecture
October 18, 2019

3:45pm - 5:15pm
@Seminar Hall, 10th floor, Pixel A

Science & Children

From the Concrete to the Abstract – this is one cardinal principle of education. Before children can understand a thing, they need experience: seeing, touching, hearing, tasting, smelling, choosing, arranging, putting things together, and taking things apart. The hands, the heart and the head are all integrated. Children need a variety of experiences with different materials before they gain insights about science concepts. This lecture will show some possibilities of doing creative science using low-cost materials in the classroom.

SPEAKER:
ARVIND GUPTA
